

# Breast imaging PACS for digital mammography

# TM-Mammo Package

More than just a workstation

- The same *Telemis-Medical* PACS technology as in filmless hospitals right in your senology department.
- A solution that can be integrated in every existing PACS.
- A package optimized for rapid comparison with earlier studies.
- A vendor-neutral solution.

## STORAGE & BACK-UP

The images are automatically stored and archived in such a way that they can be rapidly referred to during the following screening.

## OPTIMIZED DIAGNOSTIC

5 MP medical monitors allow a high quality diagnostic. The software is optimized to read digital mammography images coming from any modality vendor.

## ADAPTED TOOLS

- Dedicated keypad for rapid viewing
- Comparison tools in one click
- Customized default layout sequence for each class of images (Image Hanging Protocols)

**Telemis** is active in the field of medical equipment and specializes in PACS solutions (Picture Archiving and Communication System).

The **TM** product line allows hospital institutions to manage their medical digital imaging and facilitates the transfer to filmless environments, providing a reduction in costs and improved patient care.

The **MC** product line provides image management and reprography solutions for private radiology practices.

With more than 1500 clients spread throughout Europe and numerous filmless PACS solutions installed, Telemis has become an important player in the medical imaging world.
